GEKKO'S

Striped leaf-toed gecko

Goggia lineata

Goggia lineata is a tiny, pale grey and striped gecko from the western part of South Africa and the far south of Namibia. It reaches only about 4 cm including tail and is one of the smallest lizards in southern Africa. It is nocturnal and lives hidden under stones and vegetation. Almost nothing is known about its care, so this guide is based on the climate and habitat.

Familie: Gekkonidae Vroegere naam: *Phyllodactylus lineatus*

KERNGEGEVENS

HET DIER

Volwassen grootte	**4 cm** totale lengte incl. staart
Levensduur	**5-8 jaar**
Actief	**'s nachts**
Levenswijze	**Rotsbewonend en bodembewonend**
Leefgebied	**Halfwoestijn en rotsachtig terrein**
Moeilijkheidsgraad	**Ervaren**

VERZORGING

Min. terrarium	**30 × 20 × 20 cm** L × B × H voor 2 volwassen dieren
Temperatuur overdag	**18-28 °C**
Temperatuur 's nachts	**10-18 °C**
Luchtvochtigheid	**50-70%**
UVB	**Optioneel**
Voeding	**Insecten en kleine ongewervelden (springstaarten, fruitvliegen)**
Gehouden	**In paren**

KWEEK

Voortplanting	**Eierleggend**
Legselgrootte	**2 eieren**
Incubatie	**60-90 dagen** bij 24-27 °C

BESCHERMING EN PAPIEREN

CITES	**Niet opgenomen**
EU-bijlage	**Niet opgenomen**
IUCN	**Niet bedreigd (LC)**

Verzorging in het kort

HET TERRARIUM	There is no documented care for *Goggia lineata*. This guide is based on the climate in the species' range, the habitat and the animal's size of about 4 cm.
TEMPERATUUR	Temperature has not been measured on the animals themselves, but follows the climate in the species' range: 24-28 °C by day and 16-18 °C at night in summer and a cool winter with 18-20 °C by day and 10-12 °C at night.
LUCHTVOCHTIGHEID EN WATER	The humidity inside the animal's hide is not documented. The coastal climate is humid, the interior drier, and winter is the wet season, so 50-70 % suits.
VERLICHTING EN UVB	The species is nocturnal and hides by day. UVB is not documented as necessary and is optional.
VOEDING	In the wild the species eats mainly ants and termites, so offer the very smallest feeder insects: fruit flies, springtails and the smallest newly hatched crickets. Prey must be smaller than the animal's head.
GEDRAG EN OMGANG	*Goggia lineata* is small, shy and fast and is not suitable for handling. It stays under cover most of the time and comes out at dusk and at night.
NATUURLIJK VERSPREIDINGSGEBIED	Zuid-Afrika en Namibië.
