AGAMÍDEOS

Maned Forest Lizard

Bronchocela jubata

Bronchocela jubata is a slender, green arboreal agamid from the forests of the Sunda Islands with a heavy, hair-like nuchal crest and a tail that makes up about four fifths of its length. It grows to 55-57 cm, is diurnal and lies in wait for insects in bushes and low foliage. It can change from green to brown or black when threatened, and it is shy and not an animal for handling.

Família: Agamidae Nome anterior: *Calotes jubatus; Bronchocela petersidoriai*

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**55-57 cm** comprimento total com a cauda
Longevidade	**5-10 anos**
Ativo	**De dia**
Estilo de vida	**Arborícola**
Habitat	**Floresta tropical**
Dificuldade	**Experiente**

CUIDADOS

Terrário mín.	**120 × 60 × 150 cm** C × L × A para 1 adulto
Temperatura, dia	**25-30 °C**
Ponto quente	**32-38 °C**
Temperatura, noite	**22-25 °C**
Umidade	**70-90%**
Água	**Sem recipiente de água**
UVB	**Recomendado** Zona de Ferguson 2
Alimentação	**Insetos**
Mantido	**Sozinho ou em casal**

REPRODUÇÃO

Reprodução	**Ovíparo**
Tamanho da postura	**2 ovos**
Incubação	**47-80 dias** a 27-31 °C

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Não listado**
Anexo da UE	**Não listado**
IUCN	**Menos preocupante (LC)**

Resumo dos cuidados

O TERRÁRIO	Little documented knowledge exists on the care of *Bronchocela jubata*. The care is based on the climate and habitat in the wild and on the closely related *Bronchocela cristatella*, which has the same requirements.
TEMPERATURA	The temperatures are borrowed from the climate in the range and from *Bronchocela cristatella*. The daytime temperature in the enclosure should be 25-30 °C, and at a basking spot high up on a branch it should be 32-38 °C.
UMIDADE E ÁGUA	Relative humidity should be 70-90 %, as in a tropical lowland forest. Mist the enclosure thoroughly twice a day, so that leaves and branches are wet. The animal drinks droplets from the plants, and a bowl is not necessary.
ILUMINAÇÃO E UVB	The species is diurnal and lives in bright bushes and forest edges, so it needs strong light and UVB.
ALIMENTAÇÃO	*Bronchocela jubata* feeds on insects such as butterflies, moths, dragonflies, flies and other small insects. It catches them from a still lookout in a bush.
COMPORTAMENTO E MANUSEIO	The species is shy and is easily stressed. When it feels threatened, it turns brown or black and flees into the foliage. It is not suited to handling and is an animal to look at.
ÁREA DE OCORRÊNCIA NATURAL	Indonésia e Malásia.
