SAPOS E RÃS

Red-eyed Treefrog

Agalychnis callidryas

Agalychnis callidryas is one of the most recognisable frogs in the terrarium hobby: leaf-green with bright red eyes, orange feet and blue and yellow flanks. It sleeps under a leaf during the day and wakes only when the lights go out. With steady warmth, high humidity and a tall, densely planted enclosure it is a rewarding frog to watch, but not to handle.

Família: Phyllomedusidae **Toxinas leves na pele**

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**4-8 cm** comprimento focinho-cloaca
Peso	**6-15 g**
Longevidade	**4-8 anos**
Ativo	**À noite**
Estilo de vida	**Arborícola**
Habitat	**Floresta tropical e área úmida**
Toxinas na pele	**Leves** Lave as mãos após o contato e mantenha os dedos longe dos olhos e da boca
Dificuldade	**Intermediário**

REPRODUÇÃO

Reprodução	**Ovíparo**
Desenvolvimento	**Girinos na água**
Local de postura	**Em folhas sobre a água**
Maturidade sexual	**12-24 meses**
Ovos por postura	**10-100**
Eclosão	**6-8 dias**
Fase larval	**35-60 dias** da eclosão até a metamorfose
Alimentação das larvas	**Algas/plantas, ração completa e outros girinos**
Cuidado parental	**Nenhum**

CUIDADOS

Terrário mín.	**45 × 45 × 60 cm** C × L × A para 2 adultos
Temperatura, dia	**24-28 °C**
Temperatura, noite	**20-22 °C**
Umidade	**60-90%**
Água	**Recipiente de água** profundidade 2-3 cm
UVB	**Opcional** Zona de Ferguson 1
Alimentação	**Insetos**
Mantido	**Em casal ou em grupo**

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Apêndice II**
IUCN	**Menos preocupante (LC)**

Resumo dos cuidados

O TERRÁRIO

Agalychnis callidryas makes use of height, so the terrarium must be tall and have many large leaves to sleep on. A pair of adults needs a terrarium of at least 45 × 45 × 60 cm and three animals at least 60 × 50 × 60 cm.

TEMPERATURA

Keep the terrarium at 24-28 °C by day and 20-22 °C at night. Unplanted terrariums easily become a few degrees warmer than planted ones. There is no winter rest.

UMIDADE E NEBULIZAÇÃO

Humidity should be 60-90 %. One misting a day gives about 60-80 %, and a spray system 1-2 times daily gives 80-90 %. Preferably mist in the evening when the frogs wake, and let the terrarium dry out a little during the day.

ÁGUA E QUALIDADE DA ÁGUA

Provide a stable, shallow water bowl in the enclosure. 2-3 cm of water is enough so that the frog can easily climb back out. The frog does not drink much, but absorbs water through its skin.

ILUMINAÇÃO E UVB

Provide 10-12 hours of light a day, primarily for the plants. The species needs no light beyond what the plants require, but a low level of UVB can be provided if possible.

ALIMENTAÇÃO

The staple food is insects of suitable size: crickets, houseflies, blowflies and moths. A feeder insect must be no larger than the distance between the frog's eyes.

COMPORTAMENTO E MANUSEIO

Agalychnis callidryas is strictly nocturnal and calm. During the day you will often see only a green lump under a leaf with its eyes closed, and that is perfectly normal.

ÁREA DE OCORRÊNCIA NATURAL

México, Belize, Guatemala, Honduras, Nicarágua, Costa Rica, Panamá e Colômbia.
