ANGUIDÉS

Campbell's Alligator Lizard

Abronia campbelli

Abronia campbelli is a small, arboreal alligator lizard found only in the oak forests of south-eastern Guatemala. It grows to about 20-30 cm, gives birth to live young and feeds on insects. The species is critically endangered in the wild, and almost nothing is known about its care; it needs a tall, airy enclosure with cool nights.

Famille: Anguidae

INFORMATIONS ESSENTIELLES

L'ANIMAL

Taille adulte	**20-30 cm** longueur totale queue comprise
Poids	**14-45 g**
Espérance de vie	**10-20 ans**
Activité	**Le jour**
Mode de vie	**Arboricole**
Habitat	**Forêt de montagne**
Difficulté	**Expérimenté**

ENTRETIEN

Terrarium min.	**50 × 50 × 75 cm** L × l × H pour 1 adulte
Température, jour	**20-27 °C**
Zone de bain de soleil	**26-30 °C**
Température, nuit	**10-18 °C**
Hygrométrie	**60-80 %**
Eau	**Pas de gamelle d'eau**
UVB	**Recommandés** Zone de Ferguson 2
Alimentation	**Insectes et vers/escargots**
Détention	**Seul**

REPRODUCTION

Reproduction	**Vivipare**
Maturité sexuelle	**24-36 mois**
Taille de la portée	**3-15 petits**
Pontes par an	**1**
Gestation	**180-240 jours**

PROTECTION ET FORMALITÉS

CITES	**Annexe I**
Annexe UE	**Annexe A**
UICN	**En danger critique (CR)**

L'entretien en bref

LE TERRARIUM	Care of *Abronia campbelli* has not been described, and the figures here are borrowed from the closely related *Abronia graminea*, the best-known species in the genus, and from the genus in general.
TEMPÉRATURE	*Abronia campbelli* does not tolerate heat. The daytime temperature should be 20-27 °C, and the basking spot under a weak spotlight may be 26-30 °C.
HYGROMÉTRIE ET EAU	The relative humidity should be 60-80 %, with the highest values at night and after misting. Mist plants, walls and the animal lightly almost every day, preferably with a pressure sprayer or a fogger that produces a fine mist.
ÉCLAIRAGE ET UVB	The species is diurnal and needs UVB. The best is natural, unfiltered sunlight, for example in a mesh cage outdoors in dry weather in summer with shade and a cool floor, so the animal can move about.
ALIMENTATION	*Abronia campbelli* feeds on insects and other small animals. Give crickets, grasshoppers, mealworms, cockroaches, snails, spiders and soft larvae. Feeder insects are fed greens and vegetables for a day before use.
COMPORTEMENT ET MANIPULATION	The species is quiet and shy. The animal spends most of the day sitting still on a branch or in a bromeliad and basks for short periods. It is not an animal to be handled.
AIRE D'ORIGINE	Guatemala.
