LACERTIDI

Iberian Emerald Lizard

Lacerta schreiberi

Lacerta schreiberi is a robust, green, diurnal lizard from mountain woodland, streams and rocky ground in north-western and central Spain and Portugal. It grows to 40 cm, the male develops a deep blue throat in the breeding season, and it does best in an outdoor enclosure with sun, cool nights and a cold winter rest.

Famiglia: Lacertidae Nome precedente: *Lacerta viridis schreiberi*

DATI ESSENZIALI

L'ANIMALE

Dimensioni da adulto	**25-40 cm** lunghezza totale inclusa la coda
Aspettativa di vita	**8-12 anni**
Attività	**Di giorno**
Stile di vita	**Rupicolo e terrestre**
Habitat	**Terreno roccioso e bosco e prato temperati**
Difficoltà	**Intermedio**

CURA

Terrario min.	**150 × 80 × 100 cm** L × P × H per 2 adulti
Temperatura, giorno	**22-30 °C**
Punto caldo	**38-45 °C**
Temperatura, notte	**12-17 °C**
Umidità	**40-60%**
Acqua	**Ciotola d'acqua**
UVB	**Consigliati** Zona Ferguson 2
Riposo invernale	**4-6 °C** 12-16 settimane
Alimentazione	**Insetti**
Detenzione	**In coppia o un maschio con più femmine**

RIPRODUZIONE

Riproduzione	**Ovipara**
Uova per deposizione	**6-28 uova**
Deposizioni all'anno	**1**
Incubazione	**37-50 giorni** a 28 °C

TUTELA E DOCUMENTI

CITES	**Non elencata**
Allegato UE	**Non elencata**
IUCN	**Minima preoccupazione (LC)**

La cura in breve

IL TERRARIO	*Lacerta schreiberi* does best in an outdoor enclosure in full sun, where the animal gets natural light, cool nights, fresh air and a natural annual cycle.
TEMPERATURA	*Lacerta schreiberi* comes from mountains where the days are warm and the nights cool. By day the enclosure should be 22-30 °C with 38-45 °C at the basking spot, and at night the temperature should fall to 12-17 °C.
UMIDITÀ E ACQUA	*Lacerta schreiberi* needs a certain humidity, but not wet surroundings. The humidity in the enclosure should be 40-60 %.
ILLUMINAZIONE E UVB	*Lacerta schreiberi* basks for large parts of the day and needs strong light and UVB. Outdoors, UVB comes from the sun, and an enclosure with glass at the front must be opened in summer, because glass blocks UVB.
ALIMENTAZIONE	*Lacerta schreiberi* is an insectivore. In an outdoor enclosure a large part of the food arrives by itself: snails, spiders, woodlice and flying insects. In addition, give mealworms, crickets, grasshoppers and waxworms.
COMPORTAMENTO E MANIPOLAZIONE	*Lacerta schreiberi* is a solitary species outside the breeding season. Males are incompatible with each other, and two males in the same enclosure end up fighting. Keep only one male.
AREALE D'ORIGINE	Spagna e Portogallo.
