LEGUANEN

Yarrow's Spiny Lizard

Sceloporus jarrovii

Sceloporus jarrovii is a sturdy, rough-scaled lizard from mountain forests and rocky terrain in the south-western USA and northern Mexico. The male has a blue throat and blue belly, and both sexes have a black collar with a white edge. The species is diurnal, feeds on insects and requires a dry, well-ventilated enclosure with rocks, UVB, a hot basking spot and a cool winter rest. It gives birth to live young.

Familie: Phrynosomatidae Vroegere naam: *Sceloporus jarrovi*

KERNGEGEVENS

HET DIER

Volwassen grootte	**15-25 cm** totale lengte incl. staart
Levensduur	**4-7 jaar**
Actief	**Overdag**
Levenswijze	**Rotsbewonend**
Leefgebied	**Bergbos en rotsachtig terrein**
Moeilijkheidsgraad	**Gevorderd**

VERZORGING

Min. terrarium	**90 × 45 × 45 cm** L × B × H voor 1 volwassen dier
Temperatuur overdag	**26-28 °C**
Zonneplek	**35-40 °C**
Temperatuur ’s nachts	**16-20 °C**
Luchtvochtigheid	**30-50%**
Water	**Waterbak**
UVB	**Onmisbaar** Fergusonzone 3
Winterrust	**8-12 °C** 8-12 weken
Voeding	**Insecten**
Gehouden	**Solitair, in paren of één mannetje met meerdere vrouwtjes**

KWEEK

Voortplanting	**Levendbarend**
Worpgrootte	**2-14 jongen**
Legsels per jaar	**1**
Draagtijd	**180-240 dagen**

BESCHERMING EN PAPIEREN

CITES	**Niet opgenomen**
EU-bijlage	**Niet opgenomen**
IUCN	**Niet bedreigd (LC)**

Verzorging in het kort

HET TERRARIUM	There is only limited detailed knowledge about the care of *Sceloporus jarrovii*, and the recommendations here are based on the species' mountain climate and on close relatives.
TEMPERATUUR	The enclosure needs a clear gradient. The air should be 26-28 °C by day, and the basking spot should be 35-40 °C at the surface, measured with an infrared thermometer.
LUCHTVOCHTIGHEID EN WATER	The air should be dry to moderately humid: 30-50%. The species does poorly in humid, still air, so ventilation must be good. Provide a shallow, stable dish of fresh water, and change the water daily.
VERLICHTING EN UVB	*Sceloporus jarrovii* is diurnal and basks in strong light, so it needs powerful lighting and UVB.
VOEDING	*Sceloporus jarrovii* is a sit-and-wait hunter that eats beetles, grasshoppers, ants, wasps, caterpillars and spiders.
GEDRAG EN OMGANG	The animal is fast and alert and defends itself by fleeing and biting. It is an animal to watch, not to handle. If it has to be picked up, hold the body from neck to vent.
NATUURLIJK VERSPREIDINGSGEBIED	Verenigde Staten en Mexico.
