AGAMÍDEOS

Kimberley Bearded Dragon

Pogona microlepidota

Pogona microlepidota is a large, diurnal bearded dragon with a small, narrow head, a broad, flat body and several rows of large spines along the sides of the body. It lives only in the north-western part of the Kimberley in Western Australia, and there is almost no care experience. The guide is based on its nearest relatives.

Família: Agamidae Nome anterior: *Amphibolurus barbatus microlepidotus; Amphibolurus microlepidotus; Uxoriousauria microlepidota*

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**45-55 cm** comprimento total com a cauda
Longevidade	**10-15 anos**
Ativo	**De dia**
Estilo de vida	**Terrestre e escavador**
Habitat	**Savana**
Dificuldade	**Intermediário**

CUIDADOS

Terrário mín.	**150 × 60 × 60 cm** C × L × A para 1 adulto
Temperatura, dia	**24-37 °C**
Ponto quente	**40-45 °C**
Temperatura, noite	**18-24 °C**
Umidade	**30-60%**
Água	**Recipiente de água**
UVB	**Essencial** Zona de Ferguson 3
Alimentação	**Insetos e plantas**
Mantido	**Sozinho**

REPRODUÇÃO

Reprodução	**Ovíparo**
Tamanho da postura	**5-19 ovos**
Incubação	**58-64 dias** a 29 °C

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Não listado**
Anexo da UE	**Não listado**
IUCN	**Menos preocupante (LC)**

Resumo dos cuidados

O TERRÁRIO	Little is known about the care of *Pogona microlepidota*, and the species has not been described in captivity.
TEMPERATURA	Heat with at least two halogen spots over the basking platform. The surface there should be 40-45 °C measured with an infrared thermometer, and the warm patch should be at least as large as the whole animal.
UMIDADE E ÁGUA	Humidity should be 30-60 %, measured at the cool end.
ILUMINAÇÃO E UVB	*Pogona microlepidota* is diurnal and needs strong, white light. The basking platform should be the brightest spot, and 75-100 % of the enclosure's length should be lit.
ALIMENTAÇÃO	*Pogona microlepidota* is fed like *Pogona minor*: mostly insects and a smaller proportion of greens. Hatchlings (under 3 months): insects 2-3 times daily and greens daily. Young animals (3-12 months): insects and greens daily.
COMPORTAMENTO E MANUSEIO	*Pogona microlepidota* is diurnal and basks a great deal. Its body language is familiar from other bearded dragons: head-bobbing towards rivals and waving a front leg as a sign of submission.
ÁREA DE OCORRÊNCIA NATURAL	Austrália.
