GECKOS

Marbled velvet gecko

Oedura marmorata

Oedura marmorata is the type species of the genus: a nocturnal gecko from the Top End of northern Australia with marbled markings and a short, swollen tail, living on rocks and trees. Since 2016 the name has applied only to the animals from the Top End, so older husbandry information under the name may concern other species.

Família: Diplodactylidae Nome anterior: *Oedura verrillii; Oedura fracticolor*

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**9-11 cm** comprimento focinho-cloaca
Longevidade	**10-15 anos**
Ativo	**À noite**
Estilo de vida	**Arborícola e rupícola**
Habitat	**Savana e terreno rochoso**
Dificuldade	**Intermediário**

CUIDADOS

Terrário mín.	**45 × 45 × 45 cm** C × L × A para 2 adultos
Temperatura, dia	**24-27 °C**
Ponto quente	**29-33 °C**
Temperatura, noite	**18-22 °C**
Umidade	**40-60%**
UVB	**Opcional** Zona de Ferguson 1
Repouso de inverno	**16-18 °C** 4 semanas
Alimentação	**Insetos**
Mantido	**Sozinho, em casal ou um macho com várias fêmeas**

REPRODUÇÃO

Reprodução	**Ovíparo**
Tamanho da postura	**1-2 ovos**
Posturas por ano	**3-5**
Incubação	**55-70 dias** a 27-29 °C

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Não listado**
Anexo da UE	**Não listado**
IUCN	**Menos preocupante (LC)**

Resumo dos cuidados

O TERRÁRIO	A pair of *Oedura marmorata* needs an enclosure of at least 45 × 45 × 45 cm (length × width × height).
TEMPERATURA	The daytime temperature is 24-27 °C, with a warm spot of 29-33 °C, for example under a small lamp over a cork board or flat stone. The heat from a bulb varies a great deal, so always measure with a digital thermometer.
UMIDADE E ÁGUA	Humidity is 40-60 %. Mist the enclosure 3-4 times a week so that the animals can drink droplets from the slabs, and preferably keep a small water bowl.
ILUMINAÇÃO E UVB	*Oedura marmorata* is nocturnal and has no documented need for UVB. If you provide UVB, it should be a weak light (Ferguson zone 1) with plenty of shade, so that the animals can withdraw completely.
ALIMENTAÇÃO	*Oedura marmorata* feeds on insects and takes most feeder insects of a suitable size: crickets, locusts, cockroaches, small mealworms and black soldier fly larvae. Prey must not be longer than the gecko's head is wide.
COMPORTAMENTO E MANUSEIO	*Oedura marmorata* is a calm and secretive animal, mostly active after dark, but it can occasionally be seen out by day. If it feels threatened, it arches its back and waves its tail.
ÁREA DE OCORRÊNCIA NATURAL	Austrália.
