SALAMANDRAS E TRITÕES

Anatolia Newt

Neurergus strauchii

Neurergus strauchii is a slender mountain-stream newt, 13-18 cm long, from eastern Turkey, black with bright yellow spots and an orange stripe along the belly. The species is relatively easy to keep and can live in water all year round or alternate between land and water. It must be kept cool and given a cold winter in order to breed.

Família: Salamandridae

Toxinas leves na pele

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**13-18 cm** comprimento total com a cauda
Longevidade	**12 anos**
Ativo	**Ao crepúsculo e à noite**
Estilo de vida	**Terrestre e semiaquático**
Habitat	**Terreno rochoso e bosque e prado temperados**
Toxinas na pele	**Leves** Lave as mãos após o contato e mantenha os dedos longe dos olhos e da boca
Dificuldade	**Intermediário**

CUIDADOS

Terrário mín.	**60 × 30 × 45 cm** C × L × A para 4 adultos
Temperatura, dia	**10-21 °C**
Temperatura, noite	**8-15 °C**
Umidade	**60-80%**
Água	**Aquaterrário** profundidade 15-30 cm
UVB	**Opcional**
Repouso de inverno	**2-10 °C** 4-12 semanas
Alimentação	**Insetos e minhocas/caracóis**
Mantido	**Em casal ou em grupo**

REPRODUÇÃO

Reprodução	**Ovíparo**
Desenvolvimento	**Larvas na água**
Local de postura	**Na água**
Maturidade sexual	**24-48 meses**
Ovos por temporada	**17-285**
Posturas por ano	**1**
Eclosão	**15-34 dias** a 15-21 °C
Fase larval	**90-210 dias** da eclosão até a metamorfose
Alimentação das larvas	**Pequenos invertebrados aquáticos (dáfnias, larvas de mosquito)**
Cuidado parental	**Nenhum**

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Não listado**
Anexo da UE	**Não listado**
IUCN	**Menos preocupante (LC)**

Resumo dos cuidados

O TERRÁRIO	*Neurergus strauchii* can be kept in two ways. One follows the animals' natural year: on land for most of the year and in water during the breeding season in spring.
TEMPERATURA	*Neurergus strauchii* loves cool conditions. In spring and autumn 10-17 °C suits it, and in summer 17-21 °C. Animals in water leave the water when it gets above 20-22 °C, and water temperatures above about 25 °C can be fatal.
UMIDADE E NEBULIZAÇÃO	The species does not need high humidity, and the enclosure should not be misted. 60-80 % suits it.
ÁGUA E QUALIDADE DA ÁGUA	The water in the aquaterrarium is 15-30 cm deep. The water must be neutral to alkaline and preferably hard; limestone in the tank keeps it that way, and if the water is soft or below pH 7, calcium carbonate is added.
ILUMINAÇÃO E UVB	The species does not need any special lighting. Daylight or fluorescent tubes are enough, preferably with a day length that follows the season: longer days in summer and shorter in winter.
ALIMENTAÇÃO	The species takes many kinds of live and dead food. On land, young crickets, mealworms, fungus beetle and wax moth larvae, earthworms, fly larvae, silverfish and snails suit it.
COMPORTAMENTO E MANUSEIO	*Neurergus strauchii* is most active at dusk and at night and hides by day in rock crevices and under stones. Animals on land are a little shy, but can learn to take food from the hand. Animals in water become very bold.
ÁREA DE OCORRÊNCIA NATURAL	Turquia.
