CAMALEÕES

Poroto Three-horned Chameleon

Trioceros fuelleborni

Trioceros fuelleborni is a small, compact, live-bearing chameleon from the montane forests of south-western Tanzania. Both sexes have three short, ringed horns, and the male's are the largest; the base colour is green with brown markings and broken pale stripes along the flanks. The species needs a cool climate with a clear night-time drop and fog, and it is very rare in captivity.

Família: Chamaeleonidae Nome anterior: *Chamaeleo fuelleborni*

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**15-25 cm** comprimento total com a cauda
Longevidade	**5-6 anos**
Ativo	**De dia**
Estilo de vida	**Arborícola**
Habitat	**Floresta de montanha**
Dificuldade	**Especialista**

CUIDADOS

Terrário mín.	**60 × 45 × 90 cm** C × L × A para 1 adulto
Temperatura, dia	**20-22 °C**
Ponto quente	**24-26 °C**
Temperatura, noite	**10-15 °C**
Umidade	**50-100%**
UVB	**Essencial** Zona de Ferguson 2
Alimentação	**Insetos**
Mantido	**Sozinho**

REPRODUÇÃO

Reprodução	**Vivíparo**
Maturidade sexual	**6-12 meses**
Tamanho da ninhada	**4-20 filhotes**
Posturas por ano	**1**
Gestação	**210-300 dias**

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Apêndice II**
Anexo da UE	**Anexo B**
IUCN	**Menos preocupante (LC)**

Resumo dos cuidados

O TERRÁRIO	Little is known about the husbandry of *Trioceros fuelleborni*. The climate in its range is cool and humid: about 20-22 °C by day and 10-15 °C at night.
TEMPERATURA	By day the temperature should be 20-22 °C, with a basking spot of 24-26 °C, which the animal can use in the morning. The temperature must not stay above 26 °C for long.
UMIDADE E ÁGUA	Night is the humid time for the species. Humidity should be 80-100 % at night and fall to 50-70 % by day. An ultrasonic fogger in the second half of the night and misting just before the lights come on give fog and dew.
ILUMINAÇÃO E UVB	The species is diurnal and needs strong light. Four T5 HO tubes of 6500 K across the width of the enclosure light a 90 cm tall enclosure well.
ALIMENTAÇÃO	*T. fuelleborni* is insectivorous and eats anything that fits in the mouth: crickets, silkworms, grasshoppers and flies. The insects themselves must have a rich diet of greens, fruit and pollen. Young are fed daily.
COMPORTAMENTO E MANUSEIO	The species is kept singly. It is moderately aggressive towards conspecifics and shy towards the keeper. It is a display animal, not a pet, and handling must be brief and rare.
ÁREA DE OCORRÊNCIA NATURAL	Tanzânia.
