SAPOS E RÃS

Cane Toad

Rhinella marina

Rhinella marina is one of the largest toads in the world: a sturdy, warty and nocturnal toad from northern South America that grows to 10-24 cm and eats almost anything it can get down. It can live 10-15 years and is hardy, but the glands behind the eyes contain a powerful poison that is dangerous to pets. The species is also notorious as an invasive, so an animal must never be released.

Família: Bufonidae Nome anterior: *Bufo marinus; Chaunus marinus* **Toxinas fortes na pele**

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**10-24 cm** comprimento focinho-cloaca
Longevidade	**10-15 anos**
Ativo	**À noite**
Estilo de vida	**Terrestre**
Habitat	**Savana e floresta tropical**
Toxinas na pele	**Fortes** Evite o contato com a pele e lave bem as mãos depois de mexer no terrário
Dificuldade	**Intermediário**

CUIDADOS

Terrário mín.	**120 × 60 × 60 cm** C × L × A para 1 adulto
Temperatura, dia	**23-28 °C**
Temperatura, noite	**20-22 °C**
Umidade	**60-70%**
Água	**Recipiente de água**
UVB	**Opcional** Zona de Ferguson 1
Alimentação	**Insetos, vertebrados e minhocas/caracóis**
Mantido	**Sozinho**

REPRODUÇÃO

Reprodução	**Ovíparo**
Desenvolvimento	**Girinos na água**
Local de postura	**Na água**
Ovos por postura	**8.000-35.000**
Eclosão	**1-7 dias**
Fase larval	**12-60 dias** da eclosão até a metamorfose
Alimentação das larvas	**Algas/plantas e outros girinos**
Cuidado parental	**Nenhum**

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Não listado**
IUCN	**Menos preocupante (LC)**

Resumo dos cuidados

O TERRÁRIO	An adult needs an enclosure of at least 120 × 60 × 60 cm (length × width × height). A small male can manage with less, but females grow largest. Floor area matters more than height.
TEMPERATURA	During the day the enclosure should be about 23-26 °C and never above 28 °C, and at night it can drop to 20-22 °C.
UMIDADE E NEBULIZAÇÃO	Humidity should be about 60-70 %. The substrate is kept moist, but not wet, and the enclosure is misted with dechlorinated water a couple of times a day, so the toad can absorb water through the skin of the belly.
ÁGUA E QUALIDADE DA ÁGUA	The toad must always have a large, stable water dish that it can sit in, and where the water reaches no higher than the mouth, so it does not drown.
ILUMINAÇÃO E UVB	The species is nocturnal and avoids direct sun, so it does not need strong lighting. UVB is optional: in the wild the animal gets a little UVB in partial shade, but food with calcium and D3 covers the need.
ALIMENTAÇÃO	*R. marina* is a predator and eats almost anything that can fit in its mouth, both live and dead.
COMPORTAMENTO E MANUSEIO	The toad is calm and lies hidden most of the day. At night it becomes active and moves in short, quick hops. If it feels threatened, it puffs itself up, raises its body and can secrete poison from the glands behind the eyes.
ÁREA DE OCORRÊNCIA NATURAL	Colômbia, Venezuela, Trinidad e Tobago, Guiana, Suriname, Guiana Francesa, Brasil, Equador, Peru e Bolívia.
