SAPOS E RÃS

Green Treefrog

Dryophytes cinereus

Dryophytes cinereus is a slender, light green treefrog of 3-6 cm from the south-eastern USA with a light stripe along each side and horizontal pupils. It is hardy, lives 5-10 years in captivity and is one of the easiest treefrogs to start with. It is nocturnal, and the males call loudly, so the enclosure does not belong in the bedroom.

Família: Hylidae Nome anterior: *Hyla cinerea* **Toxinas leves na pele**

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**3-6 cm** comprimento focinho-cloaca
Peso	**2,2-5,1 g**
Longevidade	**5-10 anos**
Ativo	**À noite**
Estilo de vida	**Arborícola**
Habitat	**Área úmida e bosque e prado temperados**
Toxinas na pele	**Leves** Lave as mãos após o contato e mantenha os dedos longe dos olhos e da boca
Dificuldade	**Iniciante**

CUIDADOS

Terrário mín.	**45 × 45 × 60 cm** C × L × A para 2 adultos
Temperatura, dia	**24-28 °C**
Temperatura, noite	**19-24 °C**
Umidade	**50-80%**
Água	**Recipiente de água**
UVB	**Opcional** Zona de Ferguson 1
Alimentação	**Insetos**
Mantido	**Sozinho, em casal ou em grupo**

REPRODUÇÃO

Reprodução	**Ovíparo**
Desenvolvimento	**Girinos na água**
Local de postura	**Na água**
Maturidade sexual	**12-24 meses**
Ovos por postura	**275-3.946**
Eclosão	**4-14 dias**
Fase larval	**24-45 dias** da eclosão até a metamorfose
Alimentação das larvas	**Algas/plantas e ração completa**
Cuidado parental	**Nenhum**

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Não listado**
IUCN	**Menos preocupante (LC)**

Resumo dos cuidados

O TERRÁRIO	A pair of *D. cinereus* needs a terrarium of at least 45 × 45 × 60 cm. A group of 3-6 frogs needs at least 50 × 50 × 80 cm, and bigger is always better. Height matters more than floor area, because the frog climbs.
TEMPERATURA	Keep the terrarium at 24-28 °C by day and 19-24 °C at night. In summer the day may reach about 28 °C, and a weak spot bulb over a thick branch provides a warm spot of up to 29 °C so that the frog can choose for itself.
UMIDADE E NEBULIZAÇÃO	Aim for 50-80 % humidity, and mist the terrarium every day, preferably morning and evening when the light is off. At night the humidity may be high and briefly reach 100 %, while by day, when light and heat are on, it may fall.
ÁGUA E QUALIDADE DA ÁGUA	*D. cinereus* must always have access to clean water. A shallow water dish that the frog can sit in is enough; change the water daily, and scrub the dish with an amphibian-safe product once a week.
ILUMINAÇÃO E UVB	The frog needs a fixed daily rhythm with dark nights and enough light for the plants to thrive, for example 12 hours a day or 14 hours in summer and 10 in winter. Fluorescent tubes or LEDs keep the heat down.
ALIMENTAÇÃO	*Dryophytes cinereus* is an insectivore and needs live food.
COMPORTAMENTO E MANUSEIO	*D. cinereus* is nocturnal and really gets going when the lights go out. It sits on leaves and branches and clings to vertical surfaces with the adhesive discs on its toes.
ÁREA DE OCORRÊNCIA NATURAL	Estados Unidos.
