GECKOS

Festive gecko

Narudasia festiva

Narudasia festiva is a tiny, slender rock gecko from southern Namibia with a purple-brown body and a yellow-orange tail. The genus is the only reptile genus found only in Namibia. It sits on rocks and waves its tail, and it needs warm, dry rock crevices and cool nights. Little is known about its care, so it is a species for the experienced keeper.

Familia: Gekkonidae Nombre anterior: *Quedenfeldtia festiva*

DATOS CLAVE

EL ANIMAL

Tamaño adulto	**5-8 cm** longitud total con la cola
Esperanza de vida	**5-10 años**
Activo	**De día**
Modo de vida	**Rupícola**
Hábitat	**Semidesierto y terreno rocoso**
Dificultad	**Avanzado**

CUIDADOS

Terrario mín.	**40 × 30 × 40 cm** L × An × Al para 2 adultos
Temperatura, día	**24-30 °C**
Punto caliente	**32-34 °C**
Temperatura, noche	**16-20 °C**
Humedad	**30-50 %**
UVB	**Recomendado** Zona Ferguson 2
Alimentación	**Insectos y pequeños invertebrados (colémbolos, moscas de la fruta)**
Se mantiene	**En solitario o en pareja**

CRÍA

Reproducción	**Ovípara**
Tamaño de la puesta	**1-2 huevos**
Incubación	**60-90 días** a 24-28 °C

PROTECCIÓN Y TRÁMITES

CITES	**No incluida**
Anexo de la UE	**No incluida**
UICN	**Preocupación menor (LC)**

Cuidados de un vistazo

EL TERRARIO	Little is known about the care of *Narudasia festiva*. The advice draws on the climate and habitat and on other small rock geckos from Namibia such as *Afroedura africana* and *Pachydactylus rangei*. The figures are estimates.
TEMPERATURA	The daytime temperature should be 24-30 °C, and a basking spot on a stone under a lamp should be 32-34 °C, measured on the surface of the stone. The rest of the enclosure should be cooler, so the animal can choose.
HUMEDAD Y AGUA	Keep the air dry and well ventilated, around 30-50 % relative humidity. Mist lightly a few times a week, so the animals can drink droplets from stones and the background, and let the enclosure dry out again.
ILUMINACIÓN Y UVB	The species is diurnal and sits on sunlit rocks in the wild, so UVB is recommended.
ALIMENTACIÓN	The gecko is insectivorous and takes small prey. Offer newly hatched and small crickets, fruit flies, small mealworms, firebrats, springtails and small cockroaches. Prey must be smaller than the distance between the animal's eyes.
COMPORTAMIENTO Y MANIPULACIÓN	The gecko is small and fragile and is best suited to being watched. It waves its tail when sitting on a rock and may lose the tail if it is grabbed. Avoid handling it, and never grab it by the tail.
ÁREA DE DISTRIBUCIÓN NATURAL	Namibia.
