LACÉRTIDOS

Iberian Emerald Lizard

Lacerta schreiberi

Lacerta schreiberi is a robust, green, diurnal lizard from mountain woodland, streams and rocky ground in north-western and central Spain and Portugal. It grows to 40 cm, the male develops a deep blue throat in the breeding season, and it does best in an outdoor enclosure with sun, cool nights and a cold winter rest.

Familia: Lacertidae Nombre anterior: *Lacerta viridis schreiberi*

DATOS CLAVE

EL ANIMAL

Tamaño adulto	**25-40 cm** longitud total con la cola
Esperanza de vida	**8-12 años**
Activo	**De día**
Modo de vida	**Rupícola y terrestre**
Hábitat	**Terreno rocoso y bosque y prado templados**
Dificultad	**Intermedio**

CUIDADOS

Terrario mín.	**150 × 80 × 100 cm** L × An × Al para 2 adultos
Temperatura, día	**22-30 °C**
Punto caliente	**38-45 °C**
Temperatura, noche	**12-17 °C**
Humedad	**40-60 %**
Agua	**Bebedero**
UVB	**Recomendado** Zona Ferguson 2
Reposo invernal	**4-6 °C** 12-16 semanas
Alimentación	**Insectos**
Se mantiene	**En pareja o un macho con varias hembras**

CRÍA

Reproducción	**Ovípara**
Tamaño de la puesta	**6-28 huevos**
Puestas por año	**1**
Incubación	**37-50 días** a 28 °C

PROTECCIÓN Y TRÁMITES

CITES	**No incluida**
Anexo de la UE	**No incluida**
UICN	**Preocupación menor (LC)**

Cuidados de un vistazo

EL TERRARIO

Lacerta schreiberi does best in an outdoor enclosure in full sun, where the animal gets natural light, cool nights, fresh air and a natural annual cycle.

TEMPERATURA

Lacerta schreiberi comes from mountains where the days are warm and the nights cool. By day the enclosure should be 22-30 °C with 38-45 °C at the basking spot, and at night the temperature should fall to 12-17 °C.

HUMEDAD Y AGUA

Lacerta schreiberi needs a certain humidity, but not wet surroundings. The humidity in the enclosure should be 40-60 %.

ILUMINACIÓN Y UVB

Lacerta schreiberi basks for large parts of the day and needs strong light and UVB. Outdoors, UVB comes from the sun, and an enclosure with glass at the front must be opened in summer, because glass blocks UVB.

ALIMENTACIÓN

Lacerta schreiberi is an insectivore. In an outdoor enclosure a large part of the food arrives by itself: snails, spiders, woodlice and flying insects. In addition, give mealworms, crickets, grasshoppers and waxworms.

COMPORTAMIENTO Y MANIPULACIÓN

Lacerta schreiberi is a solitary species outside the breeding season. Males are incompatible with each other, and two males in the same enclosure end up fighting. Keep only one male.

ÁREA DE DISTRIBUCIÓN NATURAL

España y Portugal.
