TORTUGAS

Brown Roofed Turtle

Pangshura smithii

Pangshura smithii is a small to medium-sized, flat-backed freshwater turtle from rivers, ponds and swamps in the Indus, Ganges and Brahmaputra systems of South Asia. The carapace is olive-brown with a faint, dark keel, and the plastron is dark with a yellow edge. The species basks several times a day, is omnivorous and is rarely kept in captivity, so little is known about its care.

Familia: Geoemydidae Nombre anterior: *Batagur smithii; Clemmys smithii; Kachuga smithii*

DATOS CLAVE

EL ANIMAL

Tamaño adulto	**15-22 cm** longitud total con la cola
Esperanza de vida	**25-50 años**
Activo	**De día**
Modo de vida	**Semiacuático**
Hábitat	**Humedal**
Dificultad	**Intermedio**

CUIDADOS

Terrario mín.	**120 × 60 × 60 cm** L × An × Al para 2 adultos
Temperatura, día	**24-29 °C**
Punto caliente	**30-35 °C**
Temperatura, noche	**18-22 °C**
Humedad	**50-80 %**
Agua	**Acuaterrario** profundidad 25-30 cm
Temperatura del agua	**24-28 °C**
UVB	**Recomendado** Zona Ferguson 2
Alimentación	**Insectos, alimento completo, plantas y lombrices/caracoles**
Se mantiene	**En solitario o en pareja**

CRÍA

Reproducción	**Ovípara**
Tamaño de la puesta	**3-10 huevos**
Incubación	**70-90 días** a 26-29 °C

PROTECCIÓN Y TRÁMITES

CITES	**Apéndice II**
Anexo de la UE	**Anexo B**
UICN	**Casi amenazada (NT)**

Cuidados de un vistazo

EL TERRARIO	Little is known about keeping *Pangshura smithii*, and the species is rarely kept. It is kept like other small and medium-sized Asian freshwater turtles that live in the water and regularly come onto land to bask and dry off.
TEMPERATURA	By day the air should be 24-29 °C and the water 24-28 °C. Over the land area a heat lamp provides a basking spot of 30-35 °C, measured on the surface with an IR thermometer. At night the air can drop to 18-22 °C.
HUMEDAD Y AGUA	Humidity should be 50-80%. The figure is an estimate that follows from a large water surface and a lightly ventilated lid. *Pangshura smithii* lives in the water and must always have clean water to drink and live in.
AGUA Y CALIDAD DEL AGUA	The water should be 24-28 °C and about twice as deep as the shell is wide: 25-30 cm for adults. The animal must always be able to reach the surface and right itself if it ends up on its back.
ILUMINACIÓN Y UVB	*Pangshura smithii* basks several times a day and is entirely diurnal. The UVB requirement is not documented, but weak to moderate UVB (Ferguson zone 2) over the basking spot is recommended.
ALIMENTACIÓN	*Pangshura smithii* is omnivorous. Adults can be given a mix of low-fat commercial aquatic turtle food, earthworms, water snails, insects and small fish, as well as aquatic plants such as duckweed and water lettuce.
COMPORTAMIENTO Y MANIPULACIÓN	*Pangshura smithii* is diurnal and often comes onto land to bask. Asian freshwater turtles of this type can usually be kept together, but males may be incompatible.
ÁREA DE DISTRIBUCIÓN NATURAL	Pakistán, India, Bangladés y Nepal.
