CAMALEONTI

Globe-horned Chameleon

Calumma globifer

Calumma globifer is a large, calm and shy chameleon from the last remnants of rainforest in the central highlands of Madagascar. It grows to 30-40 cm, and the male carries two spherical knobs on the snout, which gave the species its name. The species is threatened in the wild, needs cool, humid air with good ventilation and is only for the very experienced keeper.

Famiglia: Chamaeleonidae Nome precedente: *Chamaeleon globifer; Chamaeleo globifer; Calumma globiferum*

DATI ESSENZIALI

L'ANIMALE

Dimensioni da adulto	**30-40 cm** lunghezza totale inclusa la coda
Aspettativa di vita	**4-8 anni**
Attività	**Di giorno**
Stile di vita	**Arboricolo**
Habitat	**Foresta pluviale e foresta montana**
Difficoltà	**Specialista**

CURA

Terrario min.	**60 × 60 × 120 cm** L × P × H per 1 adulto
Temperatura, giorno	**20-25 °C**
Punto caldo	**25-27 °C**
Temperatura, notte	**15-18 °C**
Umidità	**50-100%**
UVB	**Indispensabili** Zona Ferguson 2
Alimentazione	**Insetti**
Detenzione	**Singolarmente**

RIPRODUZIONE

Riproduzione	**Ovipara**
Uova per deposizione	**25 uova**
Incubazione	**540 giorni** a 20-22 °C

TUTELA E DOCUMENTI

CITES	**Appendice II**
Allegato UE	**Allegato B**
IUCN	**In pericolo (EN)**

La cura in breve

IL TERRARIO	An adult needs an enclosure of at least 60 × 60 × 120 cm (length × width × height), and taller and larger is better.
TEMPERATURA	The daytime temperature should be 20-25 °C. On the top basking branch 25-27 °C is acceptable, but no higher, because the species comes from cool highlands and tolerates heat poorly.
UMIDITÀ E ACQUA	Humidity should be high, up to 80-100 % at night and around 50 % by day. It is essential that humidity is combined with good air movement, so that branches and leaf surfaces dry out during the day.
ILLUMINAZIONE E UVB	The species is diurnal and needs bright daylight for 12 hours a day from a strong T5 HO tube or a powerful LED lamp along the length of the enclosure. UVB is necessary.
ALIMENTAZIONE	*C. globifer* eats insects: crickets, cockroaches, grasshoppers and stick insects, and fruit flies for the smallest. Feeder insects should be of suitable size.
COMPORTAMENTO E MANIPOLAZIONE	The species is shy and quiet and relatively peaceful towards its own kind. Even so, males must not be kept together or be able to see each other. Avoid handling. Give a new animal two weeks in peace.
AREALE D'ORIGINE	Madagascar.
