Four-lined Tegu

Tupinambis quadrilineatus

Tupinambis quadrilineatus is a medium-sized, diurnal tegu from the Cerrado savannas of central Brazil, recognised by the four long longitudinal stripes along the body. Its care is almost undocumented, and the species is rare in trade. The figures in the guide are borrowed from relatives in *Tupinambis* and *Salvator*: a large, warm enclosure with a deep substrate, UVB and an experienced keeper.
