SERPENTI

Aesculapian snake

Zamenis longissimus

Zamenis longissimus is a slender, non-venomous, diurnal ratsnake that reaches 110-160 cm and is one of the largest snakes in Europe. It is an excellent climber with a smooth, bronze-sheened back, lives in warm deciduous woodland and around old stone walls, and needs a cool winter rest to thrive. It is calm and trainable, but the winter rest makes it a snake for the somewhat experienced keeper.

Famiglia: Colubridae Nome precedente: *Elaphe longissima*

DATI ESSENZIALI

L'ANIMALE

Dimensioni da adulto	**110-160 cm** lunghezza totale inclusa la coda
Peso	**350-900 g**
Aspettativa di vita	**15-25 anni**
Attività	**Di giorno**
Stile di vita	**Arboricolo e terrestre**
Habitat	**Terreno roccioso e bosco e prato temperati**
Difficoltà	**Intermedio**

CURA

Terrario min.	**120 × 75 × 80 cm** L × P × H per 1 adulto
Temperatura, giorno	**24-29 °C**
Punto caldo	**30-33 °C**
Temperatura, notte	**18-22 °C**
Umidità	**60-70%**
Acqua	**Ciotola d'acqua**
UVB	**Facoltativi**
Riposo invernale	**3-8 °C** 13-22 settimane
Alimentazione	**Vertebrati**
Detenzione	**Singolarmente**

RIPRODUZIONE

Riproduzione	**Ovipara**
Uova per deposizione	**5-11 uova**
Deposizioni all'anno	**1**
Incubazione	**42-70 giorni** a 27-28 °C

TUTELA E DOCUMENTI

CITES	**Non elencata**
Allegato UE	**Non elencata**
IUCN	**Minima preoccupazione (LC)**

La cura in breve

IL TERRARIO

An adult *Zamenis longissimus* needs an enclosure of at least 120 × 75 × 80 cm (length × width × height). The species climbs a great deal, so height is just as important as floor area, and bigger is always better.

TEMPERATURA

There must be a clear temperature gradient. During the day in the active season the background temperature should be 24-29 °C, and under the heat source there should be a basking spot of 30-33 °C.

UMIDITÀ E ACQUA

Humidity should be 60-70 %, with one corner of the substrate kept slightly damp, because the species comes from moderately moist woodland regions and not from a tropical climate.

ILLUMINAZIONE E UVB

Zamenis longissimus is diurnal and needs a clear day and night. The light is on for 12-14 hours a day in the active season, controlled by a timer, and is shortened before the winter rest. A night light is unnecessary.

ALIMENTAZIONE

Zamenis longissimus eats small mammals. In the wild 90 % of the prey is mammals, especially wood mice, mice and shrews, and the rest is mainly nestling birds and birds' eggs.

COMPORTAMENTO E MANIPOLAZIONE

Zamenis longissimus is calm and curious and usually becomes tame with regular, gentle handling. It moves slowly and purposefully through the hands.
