GEKKO'S

Pegu bent-toed gecko

Cyrtodactylus peguensis

A nocturnal gecko from Myanmar, Thailand and Peninsular Malaysia, known from the forests near Pegu. There is little reliable care information about the species, so the guide is based on experience with other species of the genus and is a cautious starting point.

Familie: Gekkonidae Vroegere naam: *Gymnodactylus peguensis*

KERNGEGEVENS

HET DIER

Volwassen grootte	**7 cm** kop-romplengte
Levensduur	**8-10 jaar**
Actief	**'s nachts**
Levenswijze	**Boombewonend en bodembewonend**
Leefgebied	**Regenwoud**
Moeilijkheidsgraad	**Gevorderd**

VERZORGING

Min. terrarium	**60 × 40 × 60 cm** L × B × H voor 1 volwassen dier
Temperatuur overdag	**23-27 °C**
Temperatuur 's nachts	**20-23 °C**
Luchtvochtigheid	**60-90%**
Water	**Waterbak**
UVB	**Optioneel**
Voeding	**Insecten**
Gehouden	**Solitair of in paren**

KWEEK

Voortplanting	**Eierleggend**
Legselgrootte	**1-2 eieren**
Incubatie	**90-150 dagen** bij 22-25 °C

BESCHERMING EN PAPIEREN

CITES	**Niet opgenomen**
EU-bijlage	**Niet opgenomen**
IUCN	**Niet bedreigd (LC)**

Verzorging in het kort

HET TERRARIUM

The husbandry of *Cyrtodactylus peguensis* is not described, so this guide is based on related species in the genus and on the requirements of nocturnal, climbing geckos from humid regions.

TEMPERATUUR

By day the temperature should be 23-27 °C and at night 20-23 °C, as for related species from humid forest. A warm basking spot is not documented as a need, and the species is not known to bask.

LUCHTVOCHTIGHEID EN WATER

Cyrtodactylus peguensis is probably dependent on high humidity. Keep it at 60-90 %, highest at night. Mist the enclosure at least once daily, and let the surface dry out slightly in between, so that mould does not develop.

VERLICHTING EN UVB

Cyrtodactylus peguensis is nocturnal and does well with weak lighting. UVB is not necessary, but a weak UVB light is an advantage.

VOEDING

Cyrtodactylus peguensis is an insectivore. Give crickets, dubia roaches and similar insects that are smaller than the distance between the animal's eyes.

GEDRAG EN OMGANG

The genus has a reputation for being shy and fast, with thin, delicate skin that tears easily. If grabbed, it can bite. Handling is therefore discouraged, and an animal should always be given time to settle in after being moved.

NATUURLIJK VERSPREIDINGSGEBIED

Myanmar (Birma), Thailand en Maleisië.
