GEKKO'S

Raukawa gecko

Woodworthia maculata

A small, nocturnal, stone-coloured gecko from New Zealand that lives on rocks, beaches and in scrub and can live beyond 30 years. It gives birth to live young and is very rare in enclosures outside its country of origin, so little is known about its care.

Familie: Diplodactylidae Vroegere naam: *Hoplodactylus maculatus; Naultinus maculatus*

KERNGEGEVENS

HET DIER

Volwassen grootte	**12-18 cm** totale lengte incl. staart
Levensduur	**30-40 jaar**
Actief	**'s nachts**
Levenswijze	**Rotsbewonend en bodembewonend**
Leefgebied	**Rotsachtig terrein en gematigd bos en grasland**
Moeilijkheidsgraad	**Gevorderd**

VERZORGING

Min. terrarium	**50 × 50 × 100 cm** L × B × H voor 2 volwassen dieren
Temperatuur overdag	**18-24 °C**
Temperatuur 's nachts	**10-16 °C**
Luchtvochtigheid	**50-70%**
UVB	**Optioneel** Fergusonzone 1
Voeding	**Insecten, fruit, nectar en kant-en-klaar voer**
Gehouden	**In paren, één mannetje met meerdere vrouwtjes of in groepen**

KWEEK

Voortplanting	**Levendbarend**
Geslachtsrijp	**18-24 maanden**
Worpgrootte	**1-2 jongen**
Legsels per jaar	**1**
Draagtijd	**90-150 dagen**

BESCHERMING EN PAPIEREN

CITES	**Bijlage III**
EU-bijlage	**Bijlage C**
IUCN	**Niet bedreigd (LC)**

Verzorging in het kort

HET TERRARIUM	Little is known about the care of *Woodworthia maculata*, because the species is hardly kept outside New Zealand.
TEMPERATUUR	There are no documented temperatures for animals in captivity. The recommendation is based on the climate of the range: 18-24 °C by day and 10-16 °C at night, with a drop across the night and cooler conditions in winter.
LUCHTVOCHTIGHEID EN WATER	Humidity should be 50-70 %, and the enclosure should be able to dry out partly during the day. Mist part of the enclosure lightly in the evening, so there is dew on leaves and stones.
VERLICHTING EN UVB	The species is nocturnal, but it often sits at the entrance of its hide and takes a little light and warmth.
VOEDING	*Woodworthia maculata* eats mainly nocturnal insects and other arthropods: crickets, moths, small cockroaches, spiders, beetles and flies. For juveniles use fruit flies, small moths, small flies and small crickets.
GEDRAG EN OMGANG	*Woodworthia maculata* is shy and quickly retreats into hiding. It is not an animal for handling, and animals that are grabbed can lose the tail.
NATUURLIJK VERSPREIDINGSGEBIED	Nieuw-Zeeland.
