KAMELEONS

Globe-horned Chameleon

Calumma globifer

Calumma globifer is a large, calm and shy chameleon from the last remnants of rainforest in the central highlands of Madagascar. It grows to 30-40 cm, and the male carries two spherical knobs on the snout, which gave the species its name. The species is threatened in the wild, needs cool, humid air with good ventilation and is only for the very experienced keeper.

Familie: Chamaeleonidae Vroegere naam: *Chamaeleon globifer; Chamaeleo globifer; Calumma globiferum*

KERNGEGEVENS

HET DIER

Volwassen grootte	**30-40 cm** totale lengte incl. staart
Levensduur	**4-8 jaar**
Actief	**Overdag**
Levenswijze	**Boombewonend**
Leefgebied	**Regenwoud en bergbos**
Moeilijkheidsgraad	**Expert**

VERZORGING

Min. terrarium	**60 × 60 × 120 cm** L × B × H voor 1 volwassen dier
Temperatuur overdag	**20-25 °C**
Zonneplek	**25-27 °C**
Temperatuur 's nachts	**15-18 °C**
Luchtvochtigheid	**50-100%**
UVB	**Onmisbaar** Fergusonzone 2
Voeding	**Insecten**
Gehouden	**Solitair**

KWEEK

Voortplanting	**Eierleggend**
Legselgrootte	**25 eieren**
Incubatie	**540 dagen** bij 20-22 °C

BESCHERMING EN PAPIEREN

CITES	**Bijlage II**
EU-bijlage	**Bijlage B**
IUCN	**Bedreigd (EN)**

Verzorging in het kort

HET TERRARIUM	An adult needs an enclosure of at least 60 × 60 × 120 cm (length × width × height), and taller and larger is better.
TEMPERATUUR	The daytime temperature should be 20-25 °C. On the top basking branch 25-27 °C is acceptable, but no higher, because the species comes from cool highlands and tolerates heat poorly.
LUCHTVOCHTIGHEID EN WATER	Humidity should be high, up to 80-100 % at night and around 50 % by day. It is essential that humidity is combined with good air movement, so that branches and leaf surfaces dry out during the day.
VERLICHTING EN UVB	The species is diurnal and needs bright daylight for 12 hours a day from a strong T5 HO tube or a powerful LED lamp along the length of the enclosure. UVB is necessary.
VOEDING	*C. globifer* eats insects: crickets, cockroaches, grasshoppers and stick insects, and fruit flies for the smallest. Feeder insects should be of suitable size.
GEDRAG EN OMGANG	The species is shy and quiet and relatively peaceful towards its own kind. Even so, males must not be kept together or be able to see each other. Avoid handling. Give a new animal two weeks in peace.
NATUURLIJK VERSPREIDINGSGEBIED	Madagaskar.
