KIKKERS

Red-eyed Treefrog

Agalychnis callidryas

Agalychnis callidryas is one of the most recognisable frogs in the terrarium hobby: leaf-green with bright red eyes, orange feet and blue and yellow flanks. It sleeps under a leaf during the day and wakes only when the lights go out. With steady warmth, high humidity and a tall, densely planted enclosure it is a rewarding frog to watch, but not to handle.

Familie: Phyllomedusidae **Mild huidgif**

KERNGEGEVENS

HET DIER

Volwassen grootte	**4-8 cm** kop-romplengte
Gewicht	**6-15 g**
Levensduur	**4-8 jaar**
Actief	**'s nachts**
Levenswijze	**Boombewonend**
Leefgebied	**Regenwoud en moerasgebied**
Huidgif	**Mild** Was je handen na contact en houd je vingers uit de buurt van je ogen en mond
Moeilijkheidsgraad	**Gevorderd**

KWEEK

Voortplanting	**Eierleggend**
Ontwikkeling	**Kikkervisjes in het water**
Legplaats	**Op bladeren boven het water**
Geslachtsrijp	**12-24 maanden**
Eieren per legsel	**10-100**
Uitkomen	**6-8 dagen**
Larvenperiode	**35-60 dagen** van uitkomen tot metamorfose
Voeding van de larven	**Algen/planten, kant-en-klaar voer en andere kikkervisjes**
Broedzorg	**Geen**

VERZORGING

Min. terrarium	**45 × 45 × 60 cm** L × B × H voor 2 volwassen dieren
Temperatuur overdag	**24-28 °C**
Temperatuur 's nachts	**20-22 °C**
Luchtvochtigheid	**60-90%**
Water	**Waterbak** diepte 2-3 cm
UVB	**Optioneel** Fergusonzone 1
Voeding	**Insecten**
Gehouden	**In paren of in groepen**

BESCHERMING EN PAPIEREN

CITES	**Bijlage II**
IUCN	**Niet bedreigd (LC)**

Verzorging in het kort

HET TERRARIUM

Agalychnis callidryas makes use of height, so the terrarium must be tall and have many large leaves to sleep on. A pair of adults needs a terrarium of at least 45 × 45 × 60 cm and three animals at least 60 × 50 × 60 cm.

TEMPERATUUR

Keep the terrarium at 24-28 °C by day and 20-22 °C at night. Unplanted terrariums easily become a few degrees warmer than planted ones. There is no winter rest.

LUCHTVOCHTIGHEID EN SPROEIEN

Humidity should be 60-90 %. One misting a day gives about 60-80 %, and a spray system 1-2 times daily gives 80-90 %. Preferably mist in the evening when the frogs wake, and let the terrarium dry out a little during the day.

WATER EN WATERKWALITEIT

Provide a stable, shallow water bowl in the enclosure. 2-3 cm of water is enough so that the frog can easily climb back out. The frog does not drink much, but absorbs water through its skin.

VERLICHTING EN UVB

Provide 10-12 hours of light a day, primarily for the plants. The species needs no light beyond what the plants require, but a low level of UVB can be provided if possible.

VOEDING

The staple food is insects of suitable size: crickets, houseflies, blowflies and moths. A feeder insect must be no larger than the distance between the frog's eyes.

GEDRAG EN OMGANG

Agalychnis callidryas is strictly nocturnal and calm. During the day you will often see only a green lump under a leaf with its eyes closed, and that is perfectly normal.

NATUURLIJK VERSPREIDINGSGEBIED

Mexico, Belize, Guatemala, Honduras, Nicaragua, Costa Rica, Panama en Colombia.
