KIKKERS

Red-eyed Green Treefrog

Ranoidea chloris

Ranoidea chloris is a beautiful, vivid green tree frog of 5-7 cm from rainforest and humid forest along Australia's east coast. It has a yellow belly, purple thighs and red eyes and lives high up in the tree canopy, so it is only rarely seen outside the breeding season. Little is known about its care, so the guide is based on related Australian tree frogs.

Familie: Pelodryadidae Vroegere naam: *Litoria chloris; Chlorohyla chloris* **Mild huidgif**

KERNGEGEVENS

HET DIER

Volwassen grootte	**5-7 cm** kop-romplengte
Levensduur	**5-10 jaar**
Actief	**'s nachts**
Levenswijze	**Boombewonend**
Leefgebied	**Regenwoud en gematigd bos en grasland**
Huidgif	**Mild** Was je handen na contact en houd je vingers uit de buurt van je ogen en mond
Moeilijkheidsgraad	**Gevorderd**

KWEEK

Voortplanting	**Eierleggend**
Ontwikkeling	**Kikkervisjes in het water**
Legplaats	**In het water**
Eieren per legsel	**50-500**
Legsels per jaar	**1-5**
Larvenperiode	**41-90 dagen** van uitkomen tot metamorfose
Voeding van de larven	**Algen/planten en kant-en-klaar voer**
Broedzorg	**Geen**

VERZORGING

Min. terrarium	**45 × 45 × 60 cm** L × B × H voor 2 volwassen dieren
Temperatuur overdag	**22-27 °C**
Temperatuur 's nachts	**16-20 °C**
Luchtvochtigheid	**70-90%**
Water	**Watergedeelte** diepte 5-10 cm
UVB	**Optioneel** Fergusonzone 1
Voeding	**Insecten**
Gehouden	**Solitair, in paren of in groepen**

BESCHERMING EN PAPIEREN

CITES	**Niet opgenomen**
IUCN	**Niet bedreigd (LC)**

Verzorging in het kort

HET TERRARIUM
Little is known about the care of *Ranoidea chloris*. The recommendations here are based on the climate of the range and on experience with the related Australian tree frogs *Ranoidea caerulea* and *Ranoidea splendida*.

TEMPERATUUR
By day the temperature should be 22-27 °C and at night 16-20 °C. A cool night is natural, because the range has cooler nights than northern Australia. The figures are an estimate based on the climate of the range.

LUCHTVOCHTIGHEID EN SPROEIEN
Humidity should be 70-90 %. Mist the terrarium once a day, preferably in the evening when the frog wakes, and let the substrate dry out a little in between.

WATER EN WATERKWALITEIT
Ranoidea chloris breeds in shallow water, so a permanent water section or a large, shallow water dish suits the species.

VERLICHTING EN UVB
The species needs light for the plants and a fixed daily rhythm with a 12-14 hour day and dark nights. Fluorescent tubes or LEDs give off less heat than incandescent bulbs.

VOEDING
The food is live insects: crickets, locusts, flies, moths, dubia roaches and a smaller number of mealworms. The prey must not be longer than the distance between the frog's eyes.

GEDRAG EN OMGANG
The species is nocturnal and adapts to captivity without problems. It often becomes calm with regular contact, but tolerates a lot of handling poorly, because the skin is delicate.

NATUURLIJK VERSPREIDINGSGEBIED
Australië.
