LANDSCHILDPADDEN EN WATERSCHILDPADDEN

Red-bellied Short-necked Turtle

Emydura subglobosa

Emydura subglobosa is a colourful, diurnal side-necked turtle from rivers, lagoons and swamps in southern New Guinea and northern Australia. It has a pink to red plastron and two yellow stripes on each side of the head. Females grow to 26 cm, and the species lives for at least 20-30 years, so it needs a large, filtered aquarium with a basking spot, heat and UVB.

Familie: Chelidae Vroegere naam: *Emydura albertisii*

KERNGEGEVENS

HET DIER

Volwassen grootte	**13-26 cm** totale lengte incl. staart
Levensduur	**20-30 jaar**
Actief	**Overdag**
Levenswijze	**Semi-aquatisch**
Leefgebied	**Moerasgebied**
Moeilijkheidsgraad	**Gevorderd**

VERZORGING

Min. terrarium	**130 × 65 × 60 cm** L × B × H voor 1 volwassen dier
Temperatuur overdag	**26-29 °C**
Zonneplek	**32-35 °C**
Temperatuur 's nachts	**22-24 °C**
Luchtvochtigheid	**50-80%**
Water	**Aquaterrarium** diepte 30-40 cm
Watertemperatuur	**24-28 °C**
UVB	**Aanbevolen** Fergusonzone 2
Voeding	**Insecten, kant-en-klaar voer, planten, gewervelde dieren en wormen/slakken**
Gehouden	**Solitair**

KWEEK

Voortplanting	**Eierleggend**
Geslachtsrijp	**84-144 maanden**
Legselgrootte	**4-11 eieren**
Legsels per jaar	**2-4**
Incubatie	**60-120 dagen** bij 26-30 °C

BESCHERMING EN PAPIEREN

CITES	**Niet opgenomen**
EU-bijlage	**Niet opgenomen**
IUCN	**Niet beoordeeld (NE)**

Verzorging in het kort

HET TERRARIUM	Keep the species in a large aquarium or tub, not in an ordinary terrarium.
TEMPERATUUR	The water should be kept at 24-28 °C all year round, controlled by a thermostat and a heater that is protected against knocks.
LUCHTVOCHTIGHEID EN WATER	Humidity is governed by the water and needs no special regulation; the figure in the box applies to the air in a closed aquarium. What matters is that the basking spot is warm and dry, so that shell and skin can dry completely.
WATER EN WATERKWALITEIT	Turtles foul the water quickly. Use a powerful external filter rated for more than the aquarium's water volume, because filter capacities are stated for fish and are too optimistic for turtles.
VERLICHTING EN UVB	The basking spot needs strong light, and UVB is recommended.
VOEDING	The species is omnivorous. The staple is a complete pelleted food for aquatic turtles, supplemented with insects, worms, crustaceans, purged snails, a little whole fish and aquatic plants or leafy greens.
GEDRAG EN OMGANG	*Emydura subglobosa* is an active swimmer that feels safest in the water. It is an animal to watch, not to hold, even though many animals learn to take food from the hand.
NATUURLIJK VERSPREIDINGSGEBIED	Papoea-Nieuw-Guinea, Indonesië en Australië.
