AGAMÍDEOS

Black-soil Bearded Dragon

Pogona henrylawsoni

Pogona henrylawsoni is the smallest bearded dragon: a low, compact agamid of no more than about 30 cm from the treeless black clay plains of central Queensland, with a weak beard and a short, blunt head. It is diurnal and calm and needs far less space than *Pogona vitticeps*, but has the same need for heat, strong UVB and a diggable substrate, and lives 10-15 years.

Família: Agamidae Nome anterior: *Pogona brevis*

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**25-30 cm** comprimento total com a cauda
Longevidade	**10-15 anos**
Ativo	**De dia**
Estilo de vida	**Terrestre e escavador**
Habitat	**Semideserto e savana**
Dificuldade	**Intermediário**

CUIDADOS

Terrário mín.	**90 × 45 × 45 cm** C × L × A para 1 adulto
Temperatura, dia	**24-29 °C**
Ponto quente	**38-45 °C**
Temperatura, noite	**13-24 °C**
Umidade	**30-50%**
Água	**Recipiente de água**
UVB	**Essencial** Zona de Ferguson 3
Alimentação	**Insetos e plantas**
Mantido	**Sozinho, em casal ou um macho com várias fêmeas**

REPRODUÇÃO

Reprodução	**Ovíparo**
Maturidade sexual	**12-24 meses**
Tamanho da postura	**5-19 ovos**
Posturas por ano	**2**
Incubação	**58-64 dias** a 29 °C

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Não listado**
Anexo da UE	**Não listado**
IUCN	**Menos preocupante (LC)**

Resumo dos cuidados

O TERRÁRIO	A single adult needs an enclosure of at least 90 × 45 × 45 cm, and more space will be used. A small group, for example a male with one or more females, requires at least 120 × 60 × 60 cm.
TEMPERATURA	The basking spot should have a surface temperature of 38-45 °C, measured with an infrared thermometer on the stone. The cool end should be 24-29 °C.
UMIDADE E ÁGUA	Humidity should average 30-50 %, measured in the middle of the enclosure with a digital hygrometer. Brief fluctuations up or down are harmless.
ILUMINAÇÃO E UVB	*P. henrylawsoni* is diurnal and needs plenty of bright white light and strong UVB. Use a T5 HO tube with 10-12 % UVB in a reflective fitting on the same side as the heat lamp.
ALIMENTAÇÃO	*P. henrylawsoni* is omnivorous and eats mostly insects and leafy greens. Hatchlings (under 3 months): insects 2-3 times daily and greens daily. Young (3-7 months): insects twice daily and greens daily.
COMPORTAMENTO E MANUSEIO	*P. henrylawsoni* is calm and tolerates gentle handling, but does not like being held firmly or turned onto its back and struggles if this happens.
ÁREA DE OCORRÊNCIA NATURAL	Austrália.
