CAMALEÕES

Globe-horned Chameleon

Calumma globifer

Calumma globifer is a large, calm and shy chameleon from the last remnants of rainforest in the central highlands of Madagascar. It grows to 30-40 cm, and the male carries two spherical knobs on the snout, which gave the species its name. The species is threatened in the wild, needs cool, humid air with good ventilation and is only for the very experienced keeper.

Família: Chamaeleonidae Nome anterior: *Chamaeleon globifer; Chamaeleo globifer; Calumma globiferum*

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**30-40 cm** comprimento total com a cauda
Longevidade	**4-8 anos**
Ativo	**De dia**
Estilo de vida	**Arborícola**
Habitat	**Floresta tropical e floresta de montanha**
Dificuldade	**Especialista**

CUIDADOS

Terrário mín.	**60 × 60 × 120 cm** C × L × A para 1 adulto
Temperatura, dia	**20-25 °C**
Ponto quente	**25-27 °C**
Temperatura, noite	**15-18 °C**
Umidade	**50-100%**
UVB	**Essencial** Zona de Ferguson 2
Alimentação	**Insetos**
Mantido	**Sozinho**

REPRODUÇÃO

Reprodução	**Ovíparo**
Tamanho da postura	**25 ovos**
Incubação	**540 dias** a 20-22 °C

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Apêndice II**
Anexo da UE	**Anexo B**
IUCN	**Em perigo (EN)**

Resumo dos cuidados

O TERRÁRIO	An adult needs an enclosure of at least 60 × 60 × 120 cm (length × width × height), and taller and larger is better.
TEMPERATURA	The daytime temperature should be 20-25 °C. On the top basking branch 25-27 °C is acceptable, but no higher, because the species comes from cool highlands and tolerates heat poorly.
UMIDADE E ÁGUA	Humidity should be high, up to 80-100 % at night and around 50 % by day. It is essential that humidity is combined with good air movement, so that branches and leaf surfaces dry out during the day.
ILUMINAÇÃO E UVB	The species is diurnal and needs bright daylight for 12 hours a day from a strong T5 HO tube or a powerful LED lamp along the length of the enclosure. UVB is necessary.
ALIMENTAÇÃO	*C. globifer* eats insects: crickets, cockroaches, grasshoppers and stick insects, and fruit flies for the smallest. Feeder insects should be of suitable size.
COMPORTAMENTO E MANUSEIO	The species is shy and quiet and relatively peaceful towards its own kind. Even so, males must not be kept together or be able to see each other. Avoid handling. Give a new animal two weeks in peace.
ÁREA DE OCORRÊNCIA NATURAL	Madagascar.
