GECKOS

Persian spider gecko

Agamura persica

A slender, long-legged gecko from the stony semi-deserts of Iran, without adhesive pads on the toes and with dark crossbands over the back and tail. It is nocturnal, feeds on insects and is regarded as hardy in a dry rocky enclosure, but it is rare in captivity, and experience with breeding is limited.

Família: Gekkonidae Nome anterior: *Gymnodactylus persicus*

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**7-14 cm** comprimento total com a cauda
Longevidade	**5-10 anos**
Ativo	**À noite**
Estilo de vida	**Rupícola e terrestre**
Habitat	**Semideserto e terreno rochoso**
Dificuldade	**Intermediário**

CUIDADOS

Terrário mín.	**60 × 60 × 40 cm** C × L × A para 1 adulto
Temperatura, dia	**22-27 °C**
Ponto quente	**37-43 °C**
Temperatura, noite	**18-22 °C**
Umidade	**20-40%**
Água	**Recipiente de água**
UVB	**Opcional**
Repouso de inverno	**16-22 °C** 6-8 semanas
Alimentação	**Insetos**
Mantido	**Sozinho ou em casal**

REPRODUÇÃO

Reprodução	**Ovíparo**
Maturidade sexual	**18-24 meses**
Tamanho da postura	**1-2 ovos**
Incubação	**65-70 dias** a 28-30 °C

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Não listado**
Anexo da UE	**Não listado**
IUCN	**Menos preocupante (LC)**

Resumo dos cuidados

O TERRÁRIO	The species is ground-dwelling and climbs on rocks, so floor area matters more than height. An adult needs an enclosure with a floor of at least 60 × 60 cm.
TEMPERATURA	Give the terrarium a clear temperature gradient. The cool side is kept at 22-27 °C, and on a flat stone under a heat lamp a warm spot of 37-43 °C is created where the gecko can bask.
UMIDADE E ÁGUA	The humidity should be low to moderate. A precise figure is not documented for the species, but 20-40 % corresponds to the dry semi-desert it comes from, and high humidity easily causes problems.
ILUMINAÇÃO E UVB	The species is nocturnal, but regular daylight from an ordinary fluorescent tube or an LED lamp gives a clear daily rhythm and makes it possible to see the animals.
ALIMENTAÇÃO	The species is an insectivore. The staple diet is crickets and mealworms, and wax moth larvae are given only as an occasional treat, because they are fatty.
COMPORTAMENTO E MANUSEIO	*Agamura persica* is fast, somewhat shy and best as an animal to watch. It can leap and climb on rocks and is hard to catch if it escapes, so open the enclosure calmly.
ÁREA DE OCORRÊNCIA NATURAL	Irã.
