GECKOS

Satpura leopard gecko

Eublepharis satpuraensis

A medium-sized, ground-dwelling gecko from deciduous forests in central India, with movable eyelids, velvety skin and pale crossbands over the back and tail. It is nocturnal and lives on insects. The species was first described in 2014, and husbandry is based on the closely related *Eublepharis macularius*.

Família: Eublepharidae

DADOS PRINCIPAIS

O ANIMAL

Tamanho adulto	**12-13 cm** comprimento focinho-cloaca
Longevidade	**10-20 anos**
Ativo	**Ao crepúsculo e à noite**
Estilo de vida	**Terrestre**
Habitat	**Floresta seca**
Dificuldade	**Intermediário**

CUIDADOS

Terrário mín.	**90 × 45 × 45 cm** C × L × A para 1 adulto
Temperatura, dia	**24-29 °C**
Ponto quente	**32-35 °C**
Temperatura, noite	**18-22 °C**
Umidade	**40-60%**
UVB	**Recomendado** Zona de Ferguson 1
Alimentação	**Insetos**
Mantido	**Sozinho ou um macho com várias fêmeas**

REPRODUÇÃO

Reprodução	**Ovíparo**
Tamanho da postura	**1-2 ovos**
Posturas por ano	**6-8**
Incubação	**35-89 dias** a 27-32 °C

PROTEÇÃO E DOCUMENTAÇÃO

CITES	**Não listado**
Anexo da UE	**Não listado**
IUCN	**Menos preocupante (LC)**

Resumo dos cuidados

O TERRÁRIO	There is little knowledge about the husbandry of *Eublepharis satpuraensis*. The climate in the range is warm with a cool, dry winter, and the habitat is deciduous forest.
TEMPERATURA	Under the heat source the surface must be 32-35 °C, and a warm hide should be at about 32 °C. The rest of the terrarium is kept at 24-29 °C, coolest at the opposite end.
UMIDADE E ÁGUA	Humidity is kept at 40-60 %, and the terrarium must have good ventilation, so the air does not become stagnant.
ILUMINAÇÃO E UVB	The species is active at dusk and at night, but light by day regulates the daily rhythm. Give about 12-14 hours of light in summer and reduce gradually to about 8-10 hours in winter, preferably controlled by a timer.
ALIMENTAÇÃO	The animal eats only insects. Give crickets, mealworms and superworms, dubia cockroaches, silkworms and black soldier fly larvae in varying order, at least three kinds.
COMPORTAMENTO E MANUSEIO	The species is shy by day and active from dusk. Let new animals settle in for two weeks before they are handled, and then accustom them to the hand with short sessions of about 5 minutes.
ÁREA DE OCORRÊNCIA NATURAL	Índia.
